

POWERHOUSE ROAD WATER SUPPLY MAIN UPGRADING COMOX-STRATHCONA REGIONAL DISTRICT

The work involved clearing and grading, installation of 260 m of 610 mm dia. owner-supplied lap-welded steel supply main, tie-in to an existing 900 mm dia. steel watermain and the supply and installation of miscellaneous piping, valves, fittings and appurtenances. The piping arrangement involved intricate design and installation considerations due to congested large diameter piping.

Excavating to expose the existing 900 mm dia. steel water main and the two fish hatchery steel supply mains.

The new 610 mm dia. supply main following tie-in to the existing 900mm dia. watermain underneath the two fish hatchery supply mains.
